CQM6xxx

NOMENCLATURE

The radio set received is marked with the label below:

- ① Address field: address of the relevant Storno profit center.
- ② Type: combination number radio equipment, contain up to 11 digits.
- ③ Spec.: combination number radio equipment (second part, see chart) and structured options (see chart), contain up to 12 digits.
- ④ Serial no.: contain up to 12 digits.
- ⑤ Revision letter: letter giving the revision of the radio beginning with "A" or "1".
- ⑥ Country approval no.: contain up to 18 digits.

This label signifies that the radio set is:

- CQM6 - a mobile version of the 6000 serie
- 1 - TX frequency range is between 136 MHz and 174 MHz
- 1 - RX frequency range is between 136 MHz and 174 MHz
- 2 - The channel spacing is 25 kHz
- S - Simplex operation

This information is given by the "TYPE" designation.

The "SPEC" designation gives information about the radio set as well as about the structured options (see the chart on the next page). In the present example indicates that:

- 25 - the RF power output is 25 W
- C - the radio set is equipped with a comprehensive control box
- A - the set as been made for a country affiliated to STAS Export in copenhagen
- R - the control box will be installed separately for remote control

The rest of the letters are referring to structured options.

L L 0 C B B

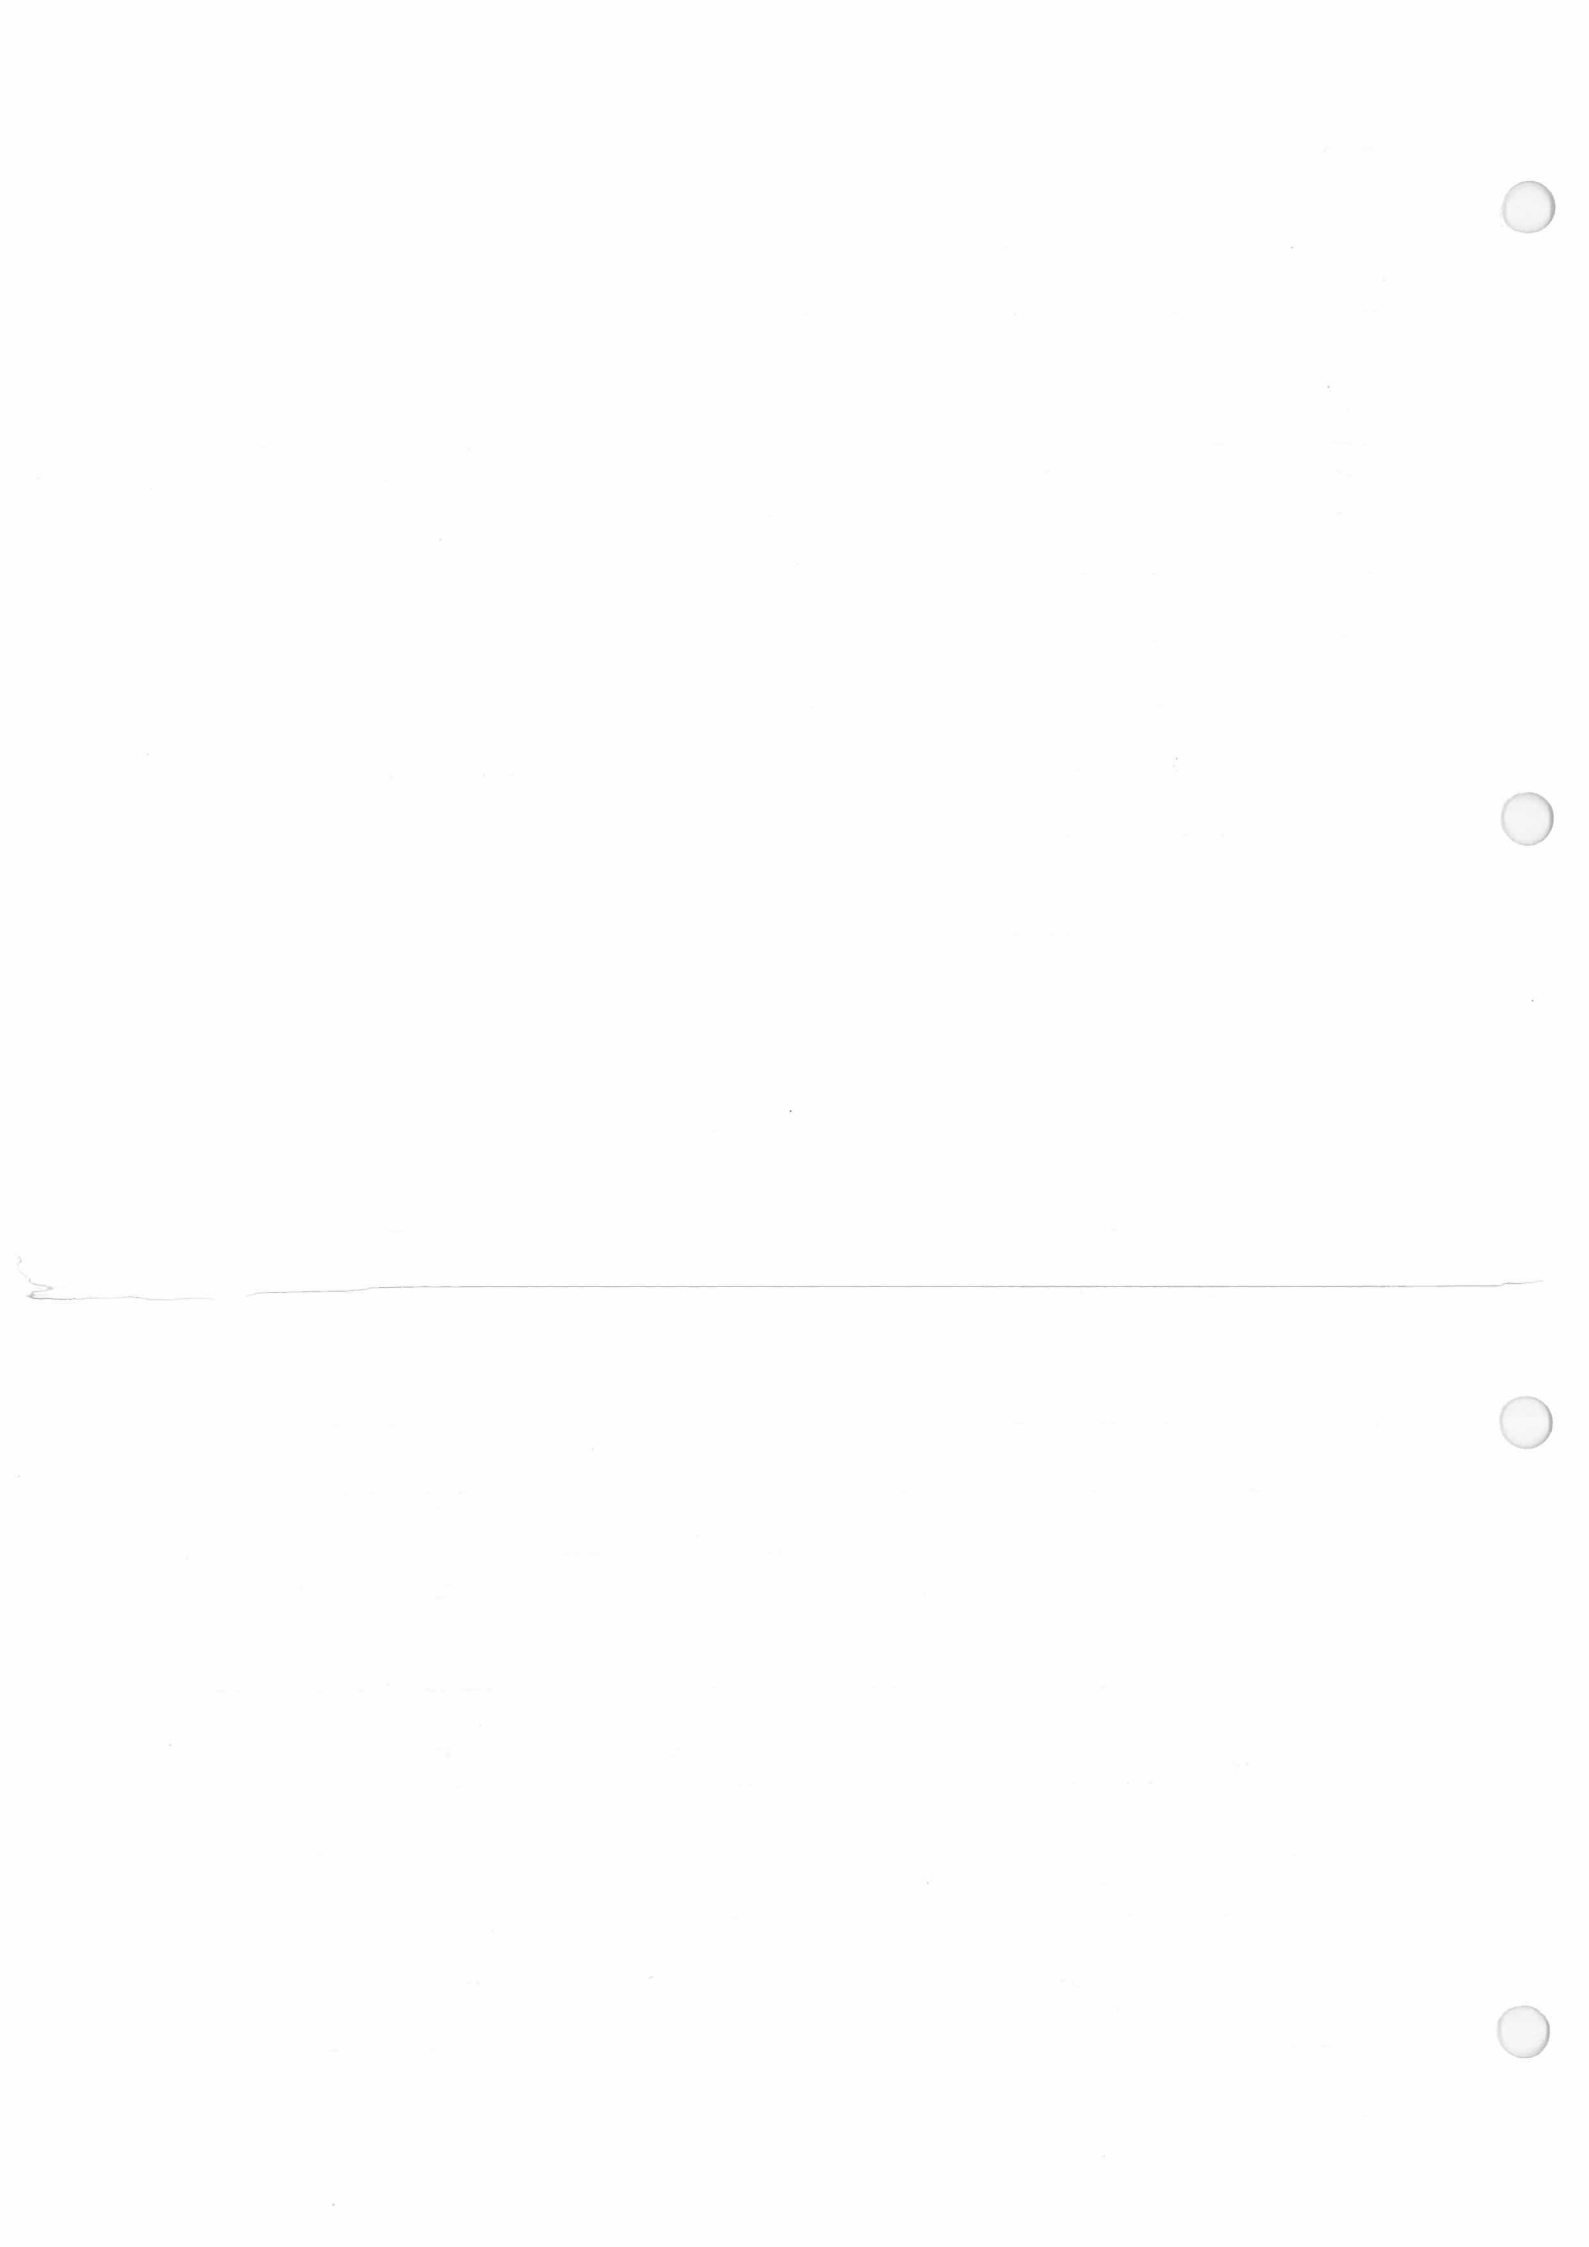

This signifies that:

- L - the TX frequency split is low meaning that it is comprised between 174 and 210 MHz.
- L - the RX frequency split is low meaning that it is comprised between 174 and 210 MHz.
- 0 - there is no possibility of using a channel guard CTCSS in this radio set.
- C - the set is controlled by use of an all-round program.
- B - the frequency stability of the radio is in the range 5 ppm.
- B - the personality data wanted can be programmed through the H-bus in the E<sup>2</sup>prom placed on the common function board (CF6001) in the radio.

## STORNOPHONE 6000

### PRESENTATION

The STORNOPHONE 6000 mobile radiotelephone is a DIN-size radio which permits mounting in the auto radio emplacement.

The radio package is rugged, splashproof and fitted with a lock. When mounted, it is locked to the mounting device and can only be removed by means of a key. On a combined control head and handset the keyhole is placed in the retainer.

The cassette mounting, provides the customer with the possibility of removing the radio from one car to another without having to worry about cables etc. The lock is released, the radio is pulled out, moved to another car or carrier case, plugged in, all connections are made automatically and the radio is operational. Beside this option the conventional mounting will of course be available.

It is possible to put several control units in parallel via a junction box.

### MAIN PARTS

The radiotelephone may be divided into two main parts:

- the radio unit
- the control box

cabinet. On the front of the radio cabinet there is a connector used for local control only.

On the back of the cabinet there are two connectors: the antenna connector, and the connector for power supply, accessories and controlbox used for remote control.

#### RADIO UNIT.

The radio unit is contained in a moulded aluminium

BNC ANTENNA CONNECTOR

MULTI CONNECTOR

see details next page

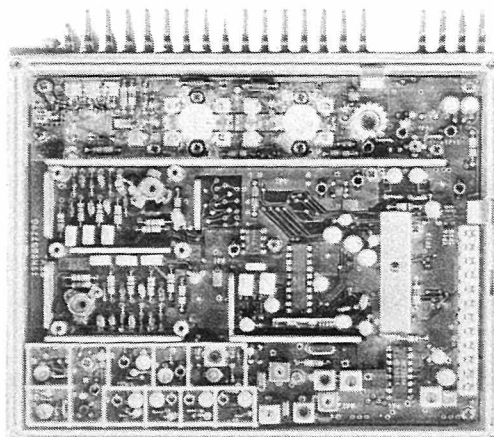

Terminal	Function	Terminal	Function
1	+ BATT	14	+ BATT
2	+ BATT	15	IGNITION
3	PORTABLE	16	CAR RADIO MUTE
4	PTT	17	CAR HORN RELAY
5	SERVICE REQ	18	SIGNAL GND
6	DIR	19	MIC HI
7	DATA	20	TONE/EMER. SW
8	ON/OFF RESET	21	HOOK SWITCH
9	+5 V	22	TX LINE
10	RX LINE	23	LS +
11	RX-PROC	24	LS -
12	- BATT	25	- BATT
13	- BATT		

If the top cover of the radio cabinet is removed the common function board and the duplex filter are revealed.

By removing the bottom cover of the radio cabinet

access is gained to the receiver and transmitter circuits.

The electrical connection between the two sections are made with a feed through connector block passing through the common function board.

CONTROL BOX

The control box consists of a metal chassis, a keyboard with push buttons, a control logic board with control lamps, and display.

The control box may be mounted in different plastic frames determining the final version of the control box.

The printed board has a Vacuum Fluorescent Display and a microprocessor. The microproces-

sor will, when a button is activated, send a message to the radio unit via the connector on the back of the chassis.

There are three different types of plastic frames for mounting of the control box:

- standard frame
- frame for combined control box/microtelephone
- orientated

The frame is determined by digit No. 4 in the control box combination number.

## MOUNTING

The set may be considered as a local and/or remote controlled radio, which is determined by the mounting chosen by the customer.

### LOCAL MOUNTING

In the local controlled version the control head or the combined control head and handset is mounted on the front of the cabinet.

The electrical connections take place via the connector on the front of the radio and on the back of the control box.

The radiotelephone may, as an option, be used in a carrier case. This requires a combined control head and handset for local mounting.

When ordering local mounting the last position of the radio combination number for as well control box as radio unit should be "L" (local).

### REMOTE MOUNTING

In the remote controlled version the radio unit and the control box can be mounted in different places in the car.

The radio is connected from a connector on the back of the radio unit to a control head and/or a combined control head and handset via a junction box.

The said junction box is also used for connection of various accessory units such as loudspeaker, microphone or handset.

The last position of the radio combination number should be "R" if remote control is wanted.

RADIO UNIT WITH ONE CONTROL BOX, LOCAL INSTALLATION.

RADIO UNIT WITH JUNCTION BOX AND TWO CONTROL BOXES AS OPTIONS REMOTE INSTALLATION.

RADIO UNIT WITH ONE CONTROL BOX, LOCAL INSTALLATION.

RADIO UNIT WITH JUNCTION BOX AND CONTROL BOX AS OPTIONS REMOTE INSTALLATION.

STORNOPHONE 6000 PRINCIPLES

D404.443/2

## STORNOPHONE 6000

## MECHANICAL DESCRIPTION

## RADIO PACKAGE DESCRIPTION

The radio package is constructed with an aluminium casting H-frame and sheet metal top and bottom covers.

The RF-board is mounted to the bottom half of center shelf, with 17 pcs. captive screws + 1 screw of plast material. 2 pcs. SMB connectors on the RF-board are going through the H-frame to the duplex filter (RX and TX connection).

The H-frame is equipped with shields placed in slots in the print, making RF shielding between the RX and the TX part of the radio.

The duplex filter is mounted with three M3 screws.

The CF board is mounted with 5/4 pcs. captive screws of each.

On the two prints the highest components are placed between each other and the chip components are placed away from each other.

## SHIELDING

The RF section and the CF section of the radio, is shielded from each other by the H-frame. The electrical connection between the two sections are made with a feed through connector block decoupling all connection and one feed through connector for power to the PA-stage.

There are four different smaller covers and one large cover for shielding the RF section.

In addition to this two weatherprotection covers are available.

# CONTROL BOX CB6xxx

## PRESENTATION

The CB6xxx is a general control head with a H-bus serial interface. It has a 16 character alphanumeric Vacuum Flourescent Display, a 24 button keyboard, 13 LED indicators, a code plug socket on the front plate, PTT- and Hook switch inputs and control outputs for local loudspeaker and microphone on/off.

The control box is always delivered with a 3.5 m long cable comprising connector for junction box when remote control has been ordered.

Up to 22 digits may be entered/stored. This will be needed when making a call direct to a local telephone number in another country. However, only the last 16 digits appear on the display.

## MECHANICAL DESCRIPTION

The dimensions of the control box for the STORNOPHONE 6000 is meeting the DIN-size specification (DIN 75500). The control box consists of a chassis to keep keyboard and display in position and protected. This module can be used in the plastic frame of the handset or the plastic frames for local/remote control with no modifications.

Keyboard buttons are silk-screened with text symbols and covered by a black cap with clear window. Activating the buttons gives a tactile feeling in the finger.

The display and the keyboard buttons are backlit by LED's. When the ambient light is below a certain level, keyboard and display are automatically illuminated and currently adjusted to the light intensity.

The three different plastic frames in which the control box can be mounted are: standard frame, orientated frame, handset frame.

Control boxes in standard frames and orientated frames are mounted on the radio unit. They may both be installed in the retainer MN6004 which is for mounting in the autoradio emplacement.

The standard frame may furthermore be mounted in a retainer, MN6005, for instalment outside the autoradio emplacement.

A control box mounted in the handset frame becomes the so-called control handset. This control handset can be mounted on front of the radio cabinet but also permits mounting separated from the radio unit in a place more convenient for the operator.

For ordering of the different control box frames see chapter 1.

# CONTROL BOX CB6201

## PRESENTATION

The CB6201 is a control head with an H-bus serial interface. It has a 16 character alphanumeric Vacuum Fluorescent Display, a 24 button keypad, 14 LED indicators, a code plug socket or microphone connector, and a lock on the front plate.

The waterproof control box is always delivered with a 3.5 m long cable comprising connector for junction box when remote control has been ordered.

Up to 22 digits may be entered/stored. This is needed when making a call direct to a local telephone number in another country. However, only the last 16 digits appear on the display.

# CONTROL BOX CB6202

## PRESENTATION

The CB6202 is a control head with a H-bus serial interface. It has a 16 character alphanumeric Vacuum Fluorescent Display, a 13 button keypad, 11 LED indicators, a photosensitive transistor and a lock on the front.

The control box is primarily aimed at heavy-duty applications offering larger buttons and an easier-to-handle selection of functions than the comprehensive control boxes.

\*

# CONTROL BOX CB6402

## PRESENTATION

The CB6402 is a watertight control box primarily intended for mounting on a motorcycle. The control box offers larger buttons as well as an easier-to-handle selection of functions than the comprehensive control boxes.

This compact heavy duty control box is only available in a remote version.

It has a 16 character alphanumeric Vacuum Fluorescent Display, a 12 button keypad, 10 symbol indicators and a light sensitive diode on the front.

## CONTROL BOX CB6xxx

### MECHANICAL DESCRIPTION

The dimensions of the control box for the STORNOPHONE 6000 is meeting the DIN-size specification (DIN 75500). The control box consists of a chassis to keep keyboard and display in position and protected. This module can be used in the plastic frame of the handset or the plastic frames for local/remote control with no modifications.

Keyboard buttons are silk-screened with text symbols and covered by a black cap with clear window. Activating the buttons gives a tactile feeling in the finger.

The display and the keyboard buttons are backlit by LED's. When the ambient light is below a certain level, keyboard and display are automatically illuminated and currently adjusted to the light intensity.

The three different plastic frames in which the control box can be mounted are: standard frame, orientated frame, handset frame.

Control boxes in standard frames and orientated frames are mounted on the radio unit. They may both be installed in the retainer MN6004 which is for mounting in the autoradio emplacement.

The standard frame may furthermore be mounted in a retainer, MN6005, for instalment outside the autoradio emplacement.

A control box mounted in the handset frame becomes the so-called control handset. This control handset can be mounted on front of the radio cabinet but also permits mounting separated from the radio unit in a place more convenient for the operator. For ordering of the different control box frames see chapter 1.

**NOTES**

- 1 PRESS ITEM 10 INTO ITEM 8
- 2 PLACE ITEM 2 IN ITEM 8
- 3 PLACE ITEM 2 IN GROOVE IN ITEM 8.
- 4 MOUNT ITEM 2 PLUGS ON PWB PINS.
- 5 PLACE ITEM W1 SMALL ON THE SPACERS AS SHOWN THEN MOUNT ITEM 13
- 6 PLACE ITEM W1 WIRING AROUND LS AS SHOWN
- 7 MOUNT SCREW ITEM 5.
- 8 MOUNT ITEM 6 AND ITEM 7.
- 9 MOUNT PWB 19L053.865 ON RADIO TURNING HOLE/PIN WITHOUT CER.CAP. AGAINST CENTER OF RADIO.

INSTALLATION

Mechanical installation  
Preparation  
Interconnection program

# STORNOPHONE 6000

## INSTALLATION

The Stornophone 6000 radiotelephone is available in different versions, local controlled, remote controlled or handset controlled. Each of the basic radio installations may be mounted as either DIN-mounted or free mounted.

When the radio is delivered all ordered hardware is supplied with the radio ready for installation. For detailed description of each item refer to the accessory chapter.

As it is impossible to give detailed instructions for all types of vehicles and the user's requirements may differ the installation should be adapted to the actual situation.

### INSTALLATION OF RADIO UNIT

The radio unit can be mounted in the DIN-place provided in some vehicles and requires a DIN cassette or it can be free mounted which requires a free mount cassette. In both cases it should be assured that the cables can be routed to the radio cassette without being exposed to excessive heat or mechanical damage.

When the mounting place for the radio unit in a remote controlled installation is chosen considerations should be given to protection against rain, splashing water and strong heat. The heat sink on the rear part of the unit should be kept free in order to allow maximum heat dissipation without the need for ventilation. Note that the heat sink during long periods of transmission can reach high temperatures and it is therefore recommended to mount the radio unit away from heat sensitive objects (plastic parts).

### INSTALLATION OF CONTROL HEAD

The control head can be mounted either in a DIN mounting frame or a free mounting frame which allows the control head to be mounted in different angles for convenient operation. When the mounting place has been chosen the mounting frame is used as template for drilling the holes for the selftapping screws.

### INSTALLATION OF JUNCTION BOX

A junction box is used in installations requiring connections to accessories. All accessories are fitted with cables which plug into the box.

When planning the installation the junction box must be located at a central place in the radio system. If necessary the box can be attached to the vehicle with selftapping screws.

#### INSTALLATION OF CABLES

The installation of STORNOMATIC 6000 requires different cables to be routed in the vehicle. A cable kit is always ordered with the radio and includes a fuse box and fuses. The fuse box shall be mounted as close to the battery as possible. The battery cable and the control cable should be routed through existing cable ducts in the vehicle if possible and tied to existing cables or clamped to the chassis. If holes are drilled these should always be fitted with suitable grommets. Before drilling any holes make sure not to damage cables or parts that might be located behind the walls.

#### INSTALLATION OF HANDSET

When the radio installation comprises a free mounted handset this requires a special mounting frame of which several are available, refer to accessories. The mounting frame is used as template for drilling of holes for selftapping screws.

#### HANDS FREE INSTALLATION

Hands free installation requires a microphone, a loudspeaker and a transmitter key switch be installed in convenient places.

The microphone should be mounted at a place in front of and as close as possible to the operator so that normal speaking distance (30 - 40 cm) is obtained.

The transmitter key switch should be mounted within convenient reach of the operator and the loudspeaker at a suitable place from where the cable can be routed to the junction box.

#### INSTALLATION OF ANTENNA

The antenna should preferably be placed as high as possible on the vehicle and free of any obstacles in order not to impair the matching and radiation pattern. The vehicle's roof is usually considered to be the best place but alternatively the antenna may be mounted on the trunk lid although this will give an unfavourable radiation pattern. In cases where the vehicle roof is non-metallic a sheet of aluminium foil, at least 1 m<sup>2</sup>, must be glued to the roof below the antenna in order to obtain the necessary ground plane.

Instructions supplied with the antenna should be followed when attaching the antenna base and the antenna cable.

# STORNOPHONE 6000

## ACCESSORIES

AN6111 J709947P1  
Stainless steel whip antenna for  
the carrying cassette.  
With a ball- and socket joint.  
Frequency range: 136 - 160 MHz

AN6112 J709947P2  
Stainless steel whip antenna for  
the carrying cassette.  
With a ball- and socket joint.  
Frequency range: 150 - 174 MHz

AN6331 J709949P1  
Stainless steel whip antenna for  
the carrying cassette.  
With a ball- and socket joint.  
Frequency range: 66 - 76 MHz

AN6332 J709949P2  
Stainless steel whip antenna for  
the carrying cassette.  
With a ball- and socket joint.  
Frequency range: 72 - 82 MHz

AN6333 J709949P3  
Stainless steel whip antenna for  
the carrying cassette.  
With a ball- and socket joint.  
Frequency range: 78 - 88 MHz

AN6664 J709165P4  
Rubber antenna for the carrying  
cassette.  
With a ball- and socket joint.  
Frequency range: 403 - 440 MHz

## STORNOPHONE 6000, ACCESSORIES

- AN6665 J709165P5  
Rubber antenna for the carrying  
cassette.  
With a ball- and socket joint.  
Frequency range: 430 - 470 MHz
- AN6771 J709948P1  
Stainless steel whip antenna for  
the carrying cassette.  
With a ball- and socket joint.  
Frequency range: 174 - 200 MHz
- AN6772 J709948P2  
Stainless steel whip antenna for  
the carrying cassette.  
With a ball- and socket joint.  
Frequency range: 190 - 215 MHz
- AN6773 J709948P3  
Stainless steel whip antenna for  
the carrying cassette.  
With a ball- and socket joint.  
Frequency range: 200 - 225 MHz
- BU6001 L855862G1  
Battery for CK6001.  
NiCd battery 12 Volts, 4 Ah.  
Size 73x200x63 mm. Weight: 1.6 kg.
- BU6002 DELETED
- BU6003 L856078G1  
Battery for CK6003.  
11 NiCd battery 12 Volts, 4 Ah.  
Size 77x200x69 mm. Weight: 1.9 kg.

STORNOPHONE 6000, ACCESSORIES

CC6001 L855686G1  
 Heavy-duty cable kit.(Weatherproof IP 54) Used for connecting the radio unit (R) the vehicle battery (B) and a junction box (JB). Fuse box is included.

CC6002 L855767G1  
 Cable kit used for connecting the radio (R) and a junction box (JB).

CC6003 L855688G1  
 Comprehensive cable kit. Includes a small junction box with connections for: A horn relay, an entertainment radio mute relay, a loudspeaker, a handset /or microphone (fixed or hand), and a push-to-talk switch.

CC6004 L855766G1  
 Cable kit used for connecting a vehicle battery cable (CC) to the radio (R) in an integrated installation.

CC6005 K805596G1  
 Cable kit used for connecting a separate control box (CB) to a junction box. Used when changing an integrated into a separate installation.

CC6006 K805713G1  
 Ignition switch cable. Used for connecting a junction box (JB) to the ignition switch (IS).

STORNOPHONE 6000, ACCESSORIES

CC6007 K805736G1 replaced by CC6015  
 Charging cable for CK6001 with connection to the cigar lighter socket.  
 Length: 2.5 meters

CC6008 K805720G1  
 Vehicle battery cable with fuses and fuse box. For use with the cable kits CC6002, CC6003 and CC6004.

CC6009 K805720G2  
 Vehicle battery cable with fuses and fuse box. For use with the cable kits CC6002, CC6003 and CC6004.

CC6010 L855686G2  
 Heavy-duty cable kit. (Weatherproof IP 54). Used for connecting the radio unit, the vehicle battery, and a junction box.

CC6011 L855939G1  
 Cable for supply from lighter plug for portable carrying cassette. Separate cigarette lighter jack included. Equipped with a 2 m cable.

CC6013 K805892G1  
 Cable kit for mounting between control box (CB) and junction box (JB) used for separate installation of the CB. The cable consists of a 3.5 m. multicable and two 14 pin connectors.

STORNOPHONE 6000, ACCESSORIES

CC6015 K805935G1  
 Charging cable for CK6003 with connection to the cigar lighter socket.  
 Length: 2.5 meters

CC6029 L856214G1  
 Heavy-duty cable kit (waterproof IP54). Used for connecting the radio unit (R) with the control box CB6402 (CB). The cable consists of a housing, a 25 pin D-connector, a 15 pin D-connector, 6 m power cable, a gasket and two screws and a fuse box with 2 pcs. 8 A fuses.

CC6034 K806092G1  
 Heavy-duty cable kit for mounting between the control box CB6402 (CB) and the junction box JB6001 (JB). Used for separate installation of the CB. The cable consists of a 2.5 m multicable, a 15 pin D-connector, and a 14 pin connector.

CK6001 DELETED, replaced by CK6003

CK6002 K805755G1  
 Shoulder strap in black nylon for mounting on the carrying cassette.

## STORNOPHONE 6000, ACCESSORIES

CK6003 M906494G1  
Carrying cassette. Can only be used in conjunction with an integrated installation with a handset control box, with handle and plastic top.  
Delivered with a built-in charging circuitry for the battery unit.  
Supply: 10-32 Volts.  
Battery unit and antenna must be ordered separately.  
Size 174 x (200/230) x 63 mm  
Weight: 1.5 kg.

CS6001 J709581G1  
Internal code plug for control box, small.

CS6001 J709581G5  
Code plug. Only simple control box. For software specification, confer with the EF software manual.

CS6002 J709581G2  
Internal code plug for control box, big

CS6003 L855909G1  
External code unit, small, used in JB6002.

CS6004 L855909G2  
External code unit, big, used in JB6002.

CS6005 L856098G2  
Code plug

STORNOPHONE 6000, ACCESSORIES

CU6002 J709284P1 Replaced by CU6005  
Wall outlet charger for CK6001,  
pocket calculator type, 220V  
AC/12 V DC, 0.7A

CU6005 K805962G2 (UK: J710238P1)  
Wall outlet charger for CK6003,  
pocket calculator type, 220V  
AC/12 V DC, 0.7A (UK: AC/18 VDC,  
1.5A)

C9PS04 M905344G1 (UK:M905344G2)  
Charger and power supply for  
carrying cassette. Capable of  
driving the radio unit even with  
unloaded batteries. Desktop use.  
220 Volts 7 Amp.  
Size: 240 x 185 x 85 mm  
Weight: 4.5 kg

HS6001 K805028G5  
Hanger without a hook switch, for  
MC6001 and MC6002.  
Cable: 2.5 m

HS6002 K805028G6  
Hanger with a hook switch, for the  
MC6001 and the MC6002.  
Cable: 2.5 m.

HS6003 M906063G2  
Separate cradle with a built-in  
loudspeaker. Used in conjunction  
with the portable version. Cable  
(3.5 meters) with a connector for  
a junction box is included.

M905787G1  
Standard frame. For reinstallation  
orders only.

## STORNOPHONE 6000, ACCESSORIES

CB6Y10DL

Handset enclosure. For  
reinstallation orders only.

HS5001

J708850P1

Clip for the MC6003.

JB6001

L855768G3

Junction box with connections for:  
Radio unit, battery, two control  
boxes, two handsets or two  
microphones (fixed or hand) with  
two push-to-talk switches, two  
loudspeakers, a horn alarm, BC  
mute, ignition switch and system  
expansion and space for  
CS6003/CS6004.

Dimensions: 142 x 80 x 42 mm.

JB6002

L855768G4

Junction box with connection for:  
Radio unit, battery, two control  
boxes, handset or microphone  
(fixed or hand) with push-to-talk  
switch, loudspeaker, horn alarm,  
BC mute, ignition switch and  
system expansion.

Dimensions: 142 x 80 x 42 mm.

LS6001

K855093G2

5 watt ball shaped loudspeaker.  
Delivered with 2.5 m cable with  
connector to the junction box.  
Impedance: 8 ohms

## STORNOPHONE 6000, ACCESSORIES

- LS6002 J708821G1  
7 watt water-proof loudspeaker.  
Delivered with 5 m cable with  
connector to the junction box.  
Impedance: 8 ohms

- MC6001 L855903G4  
Hand microphone. Cylindrical  
shape, non-directional close talk.  
With push-to-talk button and  
coiled cord.

- MC6002 L855903G5  
Hand microphone. Cylindrical  
shape, non-directional close talk.  
With push-to-talk button,  
tone-button and coiled cord.

- MC6003 J708655P1  
Fist microphone. With push-to-talk  
button and coiled cord.

- MC6004 Replaced by MC6005

- MC6005 L855959G1  
Fixed microphone with 10 cm goose  
neck for "handsfree" operation.  
Cord length: 2.5 m

- MC6006 K805894G1 (see MC6003)  
Fist microphone. With push-to-talk  
button and coiled cord.

- MK6001 J708853G1  
Plastic front cover for the  
handset control box.  
For reinstallation orders only.

## STORNOPHONE 6000, ACCESSORIES

MK6002 J708959G1  
Locking device. Must be ordered in a separate installation with a simple control box in the DIN cut-out or in the housing from MN6005.

MK6003 K805826G1  
Bottom cover for carrying cassette. For use without battery.

MN6002 L855703G2  
Free-mount cassette. Fixed bracket with antenna connector and mounting holes for cable kit and connector.

MN6003 L855703G1  
Free-mount cassette without connector strap.  
Delivered with a separate antenna connector, plug and lock-washer.

MN6004 K805674G1  
Retainer for mounting the control box into the autoradio emplacement.  
The control box is locked by means of MK6002, which have to be ordered separately.

## STORNOPHONE 6000, ACCESSORIES

- MN6005 J708992G1  
Retainer for free-mount control box. Cannot be used with an orientated frame.  
If a simple control box is selected, the locking device MK6002, must be ordered as well.

- MN6006 L855586G1  
Cassette for mounting into the autoradio emplacement. Sliding bracket with antenna connector and mounting holes for cable kit and connector.  
If a heavy-duty installation is selected, the connector strap will be removed.

- MN6007 L855935G1  
Clipboard for separate installation (radio unit in the boot). Equipped with an antenna connector.

- MN6011 L855955P1  
Fastening device for carrying cassette.

## STORNOPHONE 6000, ACCESSORIES

MN6013 L856090G1  
Mounting bracket for control box.  
Consists of an aluminum rail and two moulded plastic brackets shaped to give high installation flexibility, a junction panel provides cables and radio connections.

MT6001 M905140G2  
Ackermann standard handset. With a cradle, a push-to-talk switch.  
Delivered with 2.5 m cable with connector to the junction box.

MT6007 M906205G2  
Storno handset. Includes a cradle with a built-in loudspeaker, push-to-talk switch and volume control.  
Delivered with 2.5 m cable with connector to the junction box.

PS702 10.2918-00  
DC converter.  
Transform 8 Amp.  
(Negative pole to ground)

## STORNOPHONE 6000, ACCESSORIES

SU6001 K805200G2  
PTT switch. For mounting on the dashboard.  
Delivered with 2.5 m cable with connector to the junction box.

SU6002 K805495G2  
Horn alarm or BC mute relay.  
Cable: 5 m.

STANDARDIZATION OF ASSAYS  
The standardization of assays is a critical step in ensuring the accuracy and reliability of experimental results. This process involves comparing the results of an assay against a known standard to determine the concentration of the analyte being measured. The standardization process is typically performed using a series of dilutions of the standard, which are then compared to the results of the assay. This allows for the determination of the concentration of the analyte in the sample being tested.

STANDARDIZATION OF ASSAYS  
The standardization of assays is a critical step in ensuring the accuracy and reliability of experimental results. This process involves comparing the results of an assay against a known standard to determine the concentration of the analyte being measured. The standardization process is typically performed using a series of dilutions of the standard, which are then compared to the results of the assay. This allows for the determination of the concentration of the analyte in the sample being tested.

## CS6003 - CS6004

### EXTERNAL CODE UNIT

The code unit fits inside the JB6002 and interfaces the H-bus.

The code unit consists of a microprocessor which controls the communication between the H-bus and the memory device. It is shielded to avoid noise radiation.

The CS6003/4 is a single PWB which contains the following circuits:

- Microcontroller
- H-bus interface
- Reset circuit
- H-bus address designation
- E2 prom

The difference between CS6003 and CS6004 is the size of the memory:

- CS6003: 16 × 16 bit (256)
- CS6004: 64 × 16 bit (1024)

### CIRCUIT DESCRIPTION

#### MICROCONTROLLER

The central part of the CS module is a 8 bit Nmos microprocessor (8051) in a 40 pin dual in line (U200). The 8051 contains a non-volatile 4 K × 8 read only program memory, a volatile 128 × 8 read/write data memory, 32 I/O lines and on-chip oscillator. The clock frequency (11.132 MHz) is controlled by a crystal (Y200).

#### H-BUS INTERFACE

The microprocessor handles the serial communication on the H-bus. The external interface (U201) together with one interrupt and two control lines constitutes the H-bus interface. To make the H-bus insensitive to noise, low pass filters have been inserted on the lines.

#### RESET CIRCUIT

When the system is turned on it is necessary to reset the microcontroller. This reset pulse is coming on the reset line after the +5 volt supply is turned on in the radio part. In the delay time between the +5 volt power supply is going on and the reset pulse is coming, C204 is resetting the microcontroller.

#### H-BUS ADDRESS DESIGNATION

The addressing method is shown on the strap instruction diagram later on in this chapter. Connecting the anode of D203 to one of four points on the board with a strap, will determine which of the four precoded addresses will be used. The CS board is default wired to the highest address.

To change the address it is necessary to cut a wire on the board and strap it to the wanted address.

#### E2 PROM

The personality data in the code unit is stored in a E2 prom. It is possible to change or reprogram this E2 prom with personality data for the individual customer. The E2 prom (U202) is connected to the microprocessor via a serial data line, a serial clock line and a chip select.

## SPECIFICATIONS

#### Supply

from the radio: 5 volt  $\pm$ 0.2 V

#### Current drain

150 mA max.

#### Temperature range

Operating: -25 deg. to +60 deg.

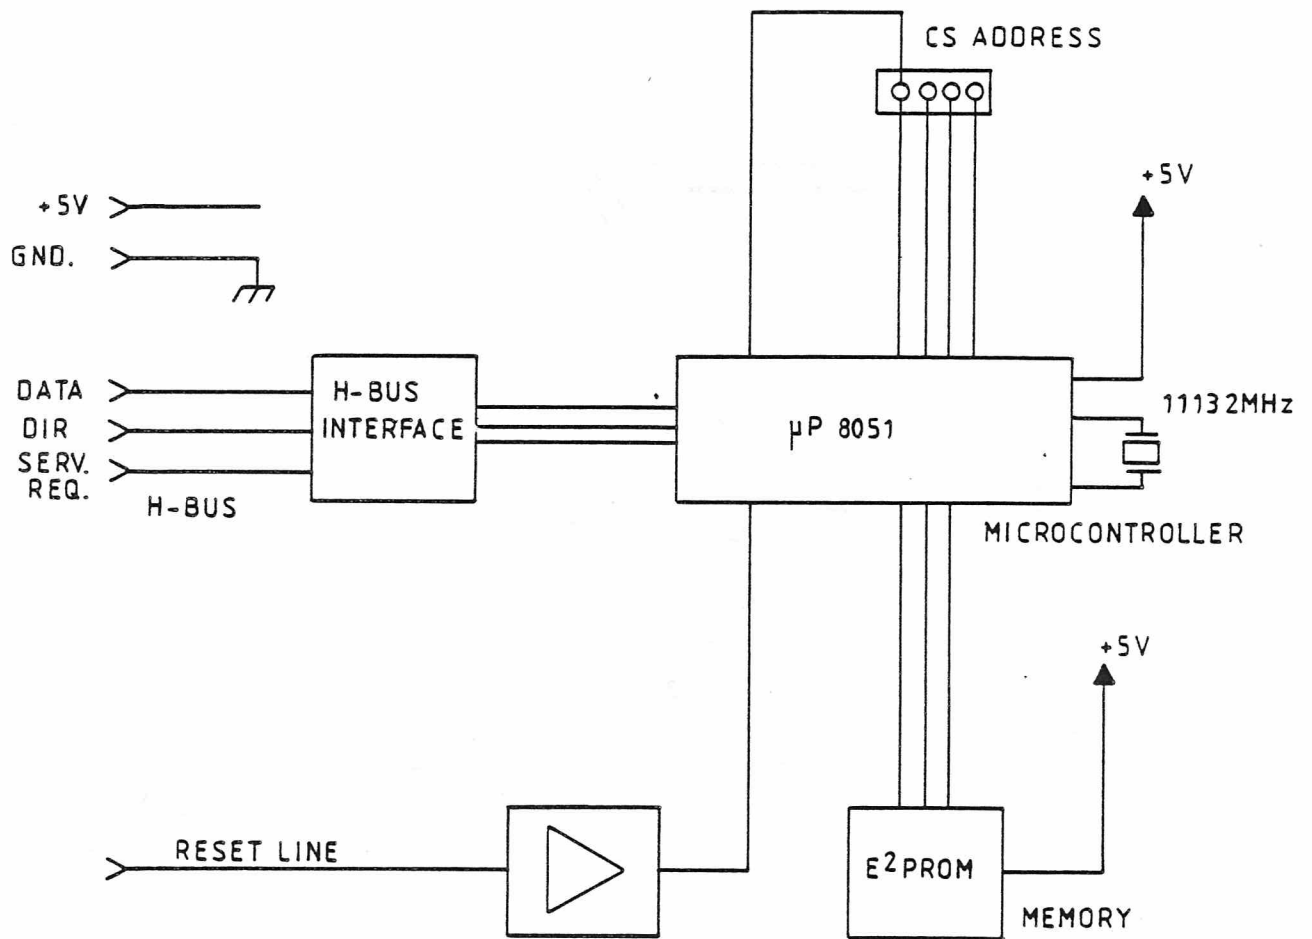

Storage: -40 deg. to +70 deg.

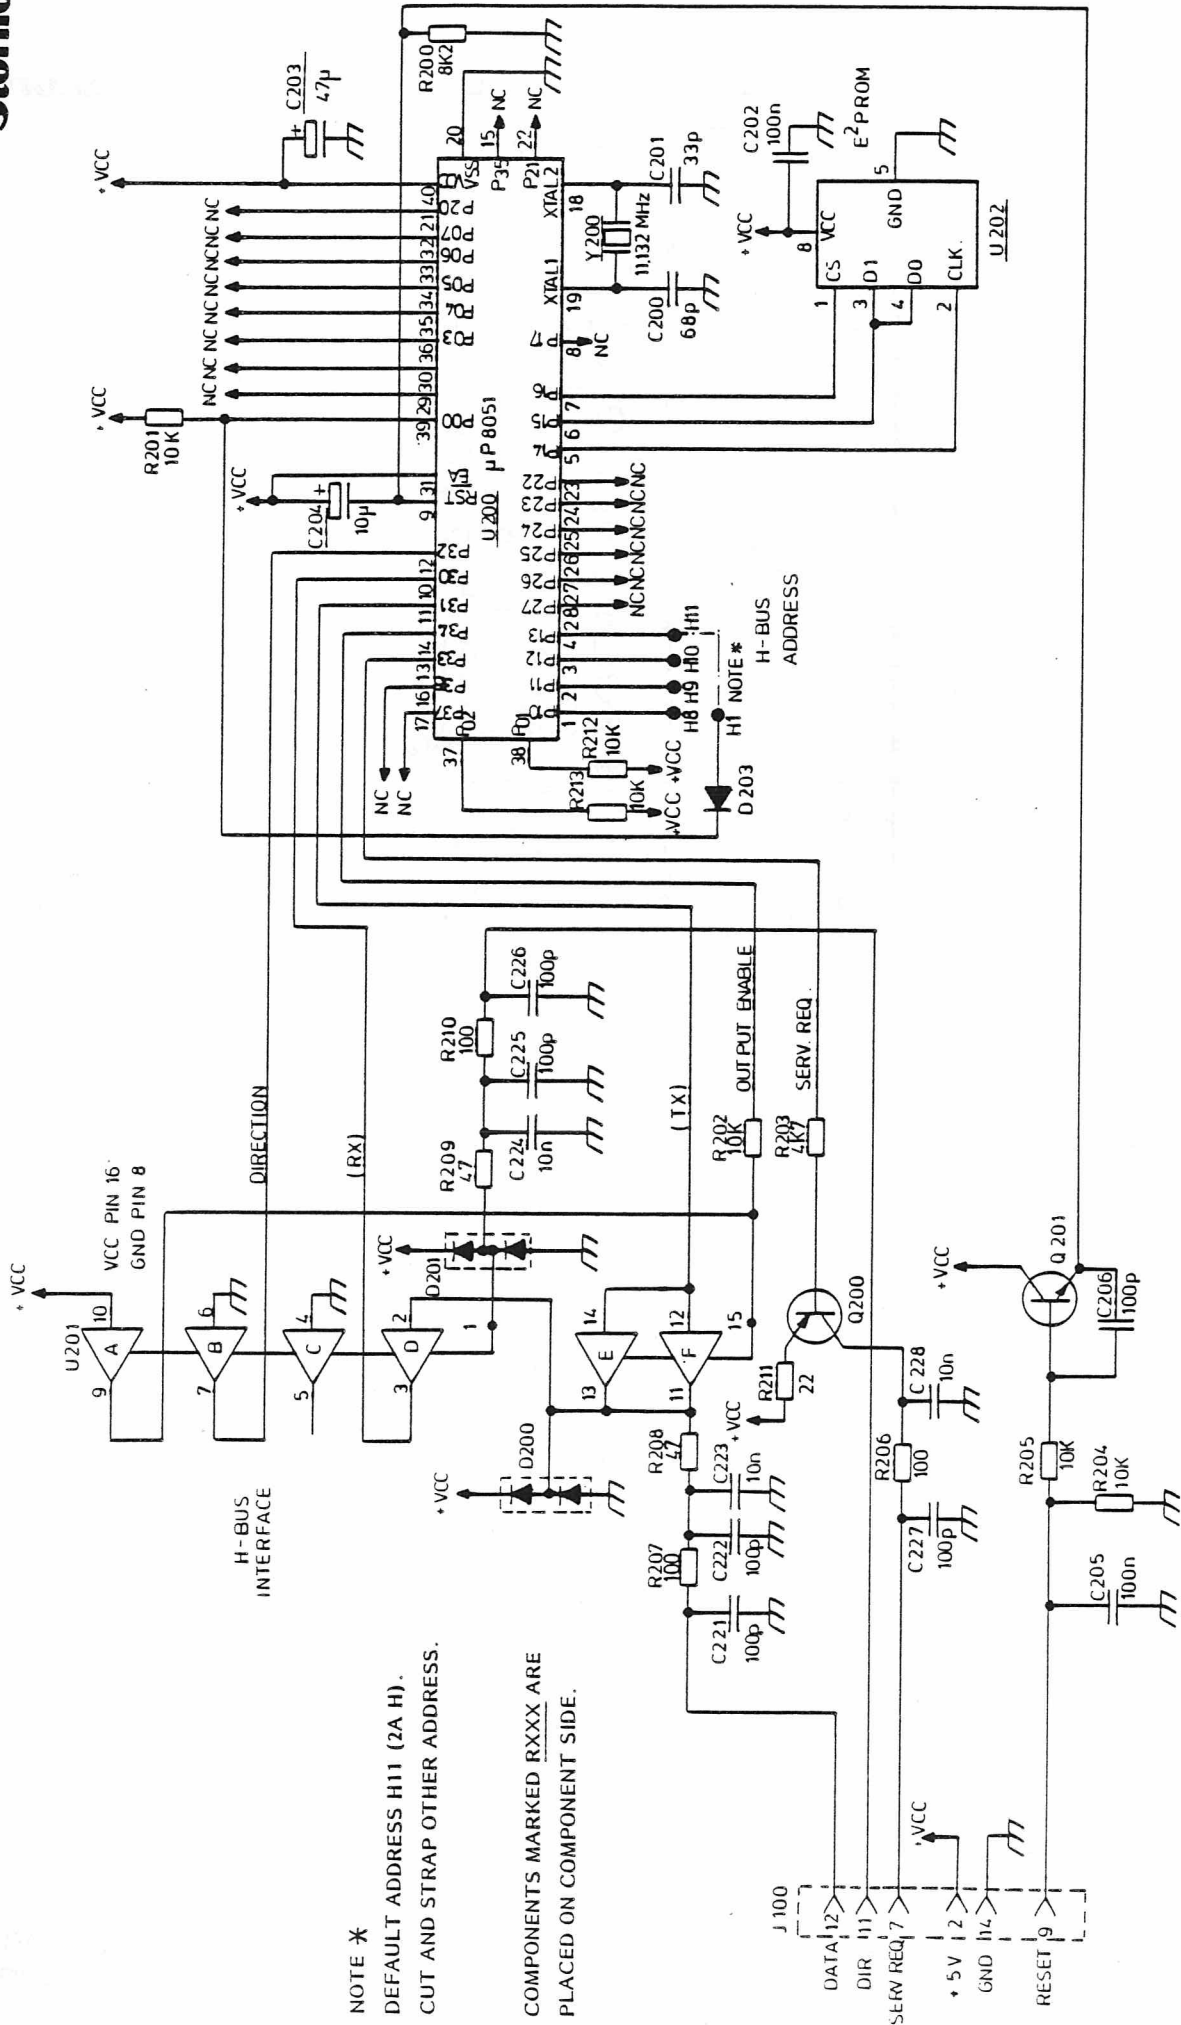

#### Dimensions

L x W x H: 56 x 37 x 20

## CODE PLUG

CS6005 is a code plug where personality data for the radio can be stored. It is programmed from factory to the customer.

The memory size is 256 bit (16 x 16).

The code plug consists of a small component board with a memory and a connector. The plug is embedded in a plastic housing.

## FUNCTIONAL DESCRIPTION

### E<sup>2</sup>PROM

The CS6005 contains a Electrical Erasable Programmable ROM (E2 PROM) (U100) where data and clock are supplied in a serial way. Also a chip select is controlling the chip. These three control signals are coming from the microprocessor on the CL6010 board via a connector (J100).

### CONNECTOR

The following signals are available on the connector (J100):

- +5 V
- Ground (logic)
- Serial data
- Serial clock
- Chip select

## TECHNICAL SPECIFICATIONS

### Supply
